

ASSET VISIBILITY

OVERVIEW

Every company faces the daunting challenge of tracking assets that drive their financial performance. In addition, public corporations must systematically track corporate assets and instill effective internal accounting controls to comply with Sarbanes-Oxley legislation. To assist with these challenges, TransitionWorks (TWS) offers an asset visibility software solution called Asset Visibility. The software helps track a multitude of asset types, and through improved asset management and scheduled asset maintenance, you can improve your top and bottom line performance.

TRANSITIONWORKS FOR ASSET VISIBILITY

The software solution captures the tag data from radio frequency identification tags or barcodes and distributes the information in easy-to-view reports on a PC, smartphone or any browser equipped device. This solution gives businesses a view in real time of the usage of their corporate assets, including tooling on the production line, totes in the distribution center, equipment in the field, assets assigned by location, or human capital. This valuable information helps businesses improve labor efficiencies--reducing the time employees waste tracking down equipment and parts. Additionally, it reduces capital requirements through more efficient usage of current assets.

FLEXIBLE WITH EXISTING SYSTEMS

Asset Visibility can operate as a stand-alone solution, or it can be integrated with corporate fixed asset, maintenance and tool crib systems as well as enterprise resource planning, warehouse management, manufacturing execution and quality control systems. We support multiple data message formats which allows us to rapidly and flexibly integrate with back office systems, IP addressable cameras,

HID access control, entrance gates, RFID portals, various data collection hardware scanners, printers, and other peripherals, so you can expand on the solution as/ when you need to. The software simplifies the infrastructure required to enter, capture and cleanse data and updates all pertinent systems.

In addition, Asset Visibility can notify the user of activities and events defined by the user through e-mail. "Role Based" dashboards enable managers and supervisors to monitor and manage assets while on the go. TransitionWorks offers the software in formats compatible with PC, tablet, or smartphone.

BUSINESS PAYBACK

- Reduce/eliminate theft of high value assets
- Reduce/eliminate need to take manual inventory of assets
- Reduce labor and frustration in finding assets
- Reduce service and maintenance of assets
- Locate misplaced, lost, or hoarded assets
- Meet SOX requirements

FEATURES

- Multiple users, simultaneous access
- Assign Assets to person/dept/location
- Parent/Child relationship location hierarchy
- Transaction History by User and Asset
- Track Asset maintenance
- Graphical Map option to display asset location
- Export data to Excel (.csv) for further manipulation
- Areas of operation can be assigned to individual users or group of users
- Reports are displayed in an HTML format that allow for printing on demand

FIXED ASSET TRACKER

Companies small and large must validate the value and existence of their fixed assets on a periodic basis by performing physical audits. Manual processes can be extremely time consuming, particularly when tracking large numbers of assets such as furniture, computer equipment and other general assets. Manufacturing companies face even greater challenges with even more assets to track, such as totes, pallets, tooling, instruments, vehicles and capital equipment. Using bar code and RFID technology, TransitionWorks offers organizations a fast, low cost approach to physically label/tag, assign, check-in/out and conduct a physical audit of assets and interface with necessary company systems. TransitionWorks' bar code solution called Fixed Asset Basic is a simple, reliable and inexpensive first step for those with manual processes. The next level in Fixed Asset tracking is to use passive RFID technology found in our Fixed Asset Advanced tracking product. By allowing mobile scanners to quickly detect all tagged assets in an area without having to find and scan each item individually, this product is proven to increase the efficiency over bar coding by 6 times. Both these solutions can be implemented by organizations in days with limited involvement from TransitionWorks.

PORTAL TRACKER

When you need greater control of higher value assets (expensive equipment, artwork, critical documents/files, vehicles, tools, instruments) that are easily moved, RFID monitoring at portal locations such as doorways, hallways, entrances and exits can be vital. TransitionWorks' Portal Tracker will automatically identify and record tagged assets as they move in and out of selected portal(s). The system can be configured to send alerts as specified events occur, (asset leaves secure area) which will dramatically improve an organization's ability to control, protect and preserve the value of critical assets.

ZONE TRACKER

Some situations require that organizations have the ability to monitor assets, in real-time, within a specified area or zone, indicating which assets are present and record when those items enter or exit. Zone Tracker has been used to monitor equipment that is checked-in and out of secure storage areas and remotely monitor inventory levels of equipment across multiple storage zones in various facilities. Our solution allows better utilization of equipment between facilities.

ENTRANCE CONTROL

The TransitionWorks Entrance Control solution is distinctive because of its ability to easily integrate with virtually any of the surrounding technologies necessary for entrance control, not simply the gate or door. Integration with video surveillance, payment systems and back-office systems allows sophisticated monitoring and alerts to be created that greatly enhance the productivity of the solution.

REAL-TIME LOCATION TRACKER

Real-Time Location Tracker (RTLTL) is the most sophisticated of our tracking solutions and provides the ability to immediately locate or find tagged assets within a monitored area and track their movements utilizing RFID technology. For example, one of TransitionWorks' customers used this solution to locate and identify movement of critical manufacturing equipment within a large manufacturing and warehousing complex. Since RTLTL has the ability to locate items within a square meter, it can be used to track personnel, contractors or visitors in facilities and monitor entrances into restricted areas. The system can also be configured to provide alerts based on the behavior of the tagged assets.

TRANSITIONWORKS FOR HIGH AVAILABILITY

TransitionWorks recognizes that tracked data is mission critical to business and must be collected quickly, reliably and accurately. Asset Visibility can be configured with High Availability for 24x7 operations. The system can be installed to automatically balance the work load during heavy usage periods and to function during fail-over scenarios such as hardware and system failures, providing you with the information you need around the clock.

ABOUT TRANSITIONWORKS SOFTWARE

TransitionWorks Software delivers innovative solutions that allow warehouse, field service, and sales operations to capture critical information, improve visibility of assets, processes and orders, and interact with their company's ERP system in real-time wherever they are. Using the latest smartphone, RFID, PLC, biometric, barcode and cloud technologies, TransitionWorks' platform is transforming hundreds of customer operations in over 20 countries across the globe. By radically simplifying processes and then putting the latest information in the hands of front-line personnel at all times, its customers make better decisions, reduce inventory levels, lower operating costs and generate higher returns.

TRANSITIONWORKS SOFTWARE SOLUTIONS:

Inventory Visibility Express

Sales Visibility (Browser Based)

TouchERP for Sales (Mobile App)

Asset Visibility

Equipment Maintenance

Custom Process Solutions

Entrance Control

Facility Evacuation

Integration Capabilities – BPCS,

SAP, Oracle, JDE, Legacy, etc.
